Mobile Cart Solution

RFID mandates are a reality for suppliers in every supply chain industry and they are fast becoming a part of normal business practices. Many, if not most, suppliers will want to expand their use of RFID technology to their entire operation to achieve a return on their investment.

The problem > These suppliers represent a wide variety of industries with different product margins, operating environments, and needs; one-size RFID solutions won't work.

Our solution > Franwell's rfid>Genesis Mobile Cart is a unique RFID hardware container that houses all the equipment necessary to run our rfid>Genesis software. Mobility offered by our solution is a convenient and affordable advantage in a warehouse or manufacturing environment where multiple stationary portals are not practical. This allows our customers to explore RFID in a way that will help them discover business processes that provide a return on their investment without making a large capital expenditure.

Hardware Components	Elo Touch Screen Monitor, Small Form Factor Computer and metals plates for mounting RFID Reader and Antenna
Software	rfid> Genesis
Service	On-site setup and training

5" Double Bearing, Directional and Rotational Lock Casters	
2 100 amp Batteries, on-board Battery Charger capable of continuous duty. Cart can be used plugged in or unplugged
